

Instructions for Secure File Processing

Background

This document serves to outline the processes and procedures for submitting secured files to `process.deadface.io:5001`.

Purpose

This app will be used to send encrypted files that will be reviewed by DEADFACE leadership. All files must be encrypted using your public keys. The significance and sensitivity of the data you submit will determine how much you get paid.

Process

The files need to be sent encrypted with your public keys, so don't send anything larger than shortened links. If `process.deadface.io` is able to unlock the file you sent over, it'll send you the NFT address. NFT prices are set internally, but you'll know how much we'll pay based off which NFT we award you.

Figure 1 below illustrates the process for submitting files.
